Good Water Company Announces New Water System *Hydration Station replaces water coolers at home and office*

(Las Vegas)—Mike Paice, president of The Good Water Company, recently announced the launch of the company's anticipated follow up product to its whole home reverse osmosis system, the Hydration Station.

The Hydration Station, a bottle-less cooler, simply attaches to the water source and supplies continuous hot and cold purified water.

“We anticipate this system to replace the bottled-water units in both homes and offices,” said Paice. “The Hydration System provides not only bottle-quality water without the bottles crowding the house or office, but also better tasting coffee and tea. With the nationwide push towards eliminating bottle water use, this gives people an opportunity to be a part of the green movement.”

Utilizing GE patented technology, the water system provides the ultimate in water purification. Certified by NSF International/ANSI, the authority on water treatment device standards, it removes nearly all of the substances found in tap water by passing it through a series of filters and membranes to reduce up to 98 percent of substances, such as arsenic, lead and radium—some particles as small as 1,000th the width of human hair.

The Hydration Station comes in all sizes and is available locally through Diamond Water. The cooler is offered on rent to own from \$29.99 per month.

Good Water Company, at 4280 W. Reno Ave., Suite F, specializes in providing reverse osmosis water products for the entire home, as well as for businesses and restaurants. The company offers numerous products designed to fit various needs. PureOFlow, the whole house reverse osmosis water filtration system, and the Hydration Station, are distributed in Las Vegas by Diamond Water. More information can be accessed at www.diamondpure.com or by calling (702) 243-9400.
