Good Water Company Announces New Green Product

Ice-O-Pure single unit machine benefits restaurants

(Las Vegas)— The Las Vegas-based Good Water Company, manufacturer of reverse osmosis water filtration products for home, businesses and food and beverage establishments, recently announced its latest green product—Ice-O-Pure.

Ice-O-Pure is a single-unit system that replaces filtration systems on most ice makers. The new technology successfully eliminates scaling and mineral build-up on ice machines and also creates pure, crystal clear ice cubes, rather than ice laden with chlorine, salts and other chemicals.

“We have already witnessed great success in the Las Vegas market,” said Good Water President, Mike Paice. “We anticipate a good deal of additional restaurants in the Valley to see the advantage of this system and put it to use.”

It is the expectation of the company to provide Ice-O-Pure to establishments across the country. Systems have already been installed in multiple well-known restaurant and hotel chains throughout the United States and Canada.

“The cost restaurants will save in filter replacement reductions and the environmental benefits of using Ice-O-Pure are key selling points,” he said. “Plus, what establishment doesn’t want to provide better tasting products?”

Ice-O-Pure is available nationwide and in most cases costs \$30 a month. The product includes full maintenance services.

Good Water Company, at 4280 W. Reno Ave., Suite F, specializes in providing reverse osmosis water products for the entire home, as well as for businesses and restaurants. The company offers numerous products designed to fit various needs. Pure-O-Flow, the whole house reverse osmosis water filtration system, is distributed in Las Vegas by Diamond Water.
