Bottled-water-quality H₂O on demand

Bid farewell to those dozens of empty water bottles, heavy trips to the trunk of your car and the regular expense of buying caseloads of bottled water with Diamond Water's whole house reverse-osmosis system by Good Water Co. of Las Vegas.

According to company President Mike Paice, the system provides bottled-water-quality water to your entire home.

"This product is surging water to the next level in terms of purity," said Paice. "Not only does it provide better-tasting drinks, but it essentially presents a bottle-water experience in the entire home. With the system, people are bathing in pure, bottle-like

water, washing dishes with it and more. The difference is amazing. It also eliminates the need for water softeners and other chemicals which only feed back into the water supply and pollute it further."

Utilizing GE-patented technology, the Diamond Water system provides the ultimate in water purification. Certified by NSF International/ANSI, the authority on water treatment device standards, it removes

nearly all of the substances found in tap water by passing it through a series of filters and membranes to reduce up to 98 percent of substances, such as arsenic, lead and radium. The four-stage design uses a KDF carbon prefilter, two reverse-osmosis membrane

elements and a carbon post-filter. Benefits include no scales in pots, coffee makers or dishwashers, spot-free glasses, spall-free water for bathing and showering, and the elimination of calcium build-up on pipes to name a few.

A complete Diamond Water system starts at \$3,400. For more information, visit www.diamondpure.com or call 243-9400.
